

Important work has outgrown the systems around it.

Critical processes often span teams, documents, spreadsheets, inboxes, applications, suppliers, and individual knowledge. The established process and the way work really happens begin to diverge.

The Messy Middle of “Established Process”

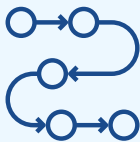

Recognition Points

- Information sits in different places, with no dependable shared view.
- People follow different routes through the same work.
- Status, ownership, decisions, and evidence are difficult to see together.
- Manual hand-offs and local workarounds become part of the process.
- Important context depends on individual memory or a small number of experts.
- Audit trails are assembled after the event rather than retained through the work.

The work becomes:

 Inconsistent	 Uncoordinated	 Hard to Audit	 Hard to improve
--	---	---	---

Bring the work together.

Automate what is predictable.

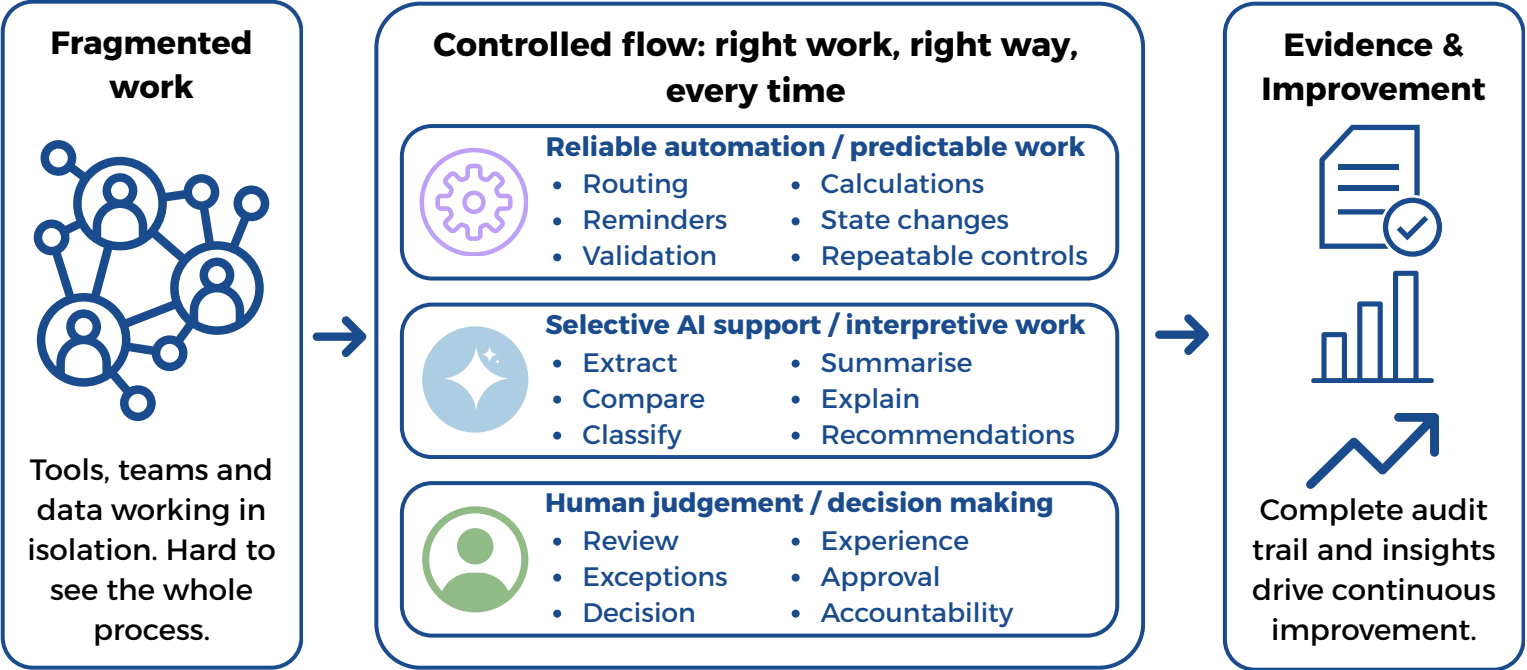

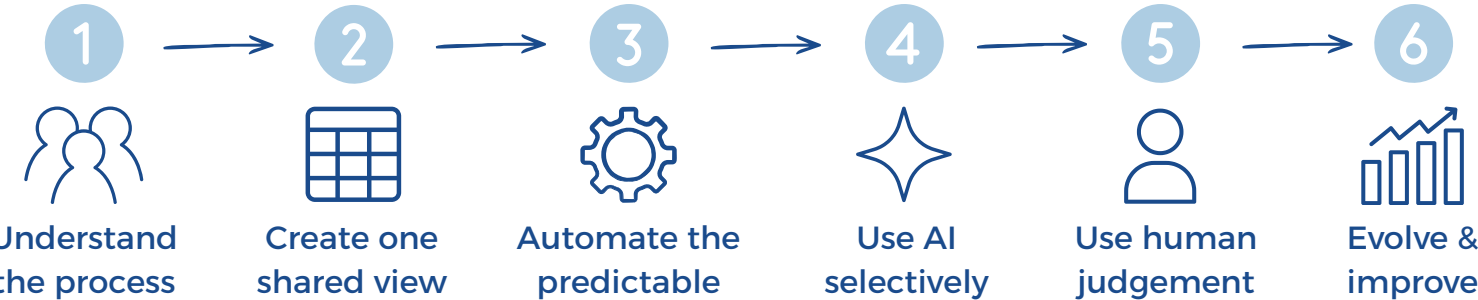

Apply intelligence where it adds value.

AI WorkBook turns fragmented processes into visible, controlled, and adaptable operational work. Start with the smallest solution that resolves the problem: a focused workflow, a small operational application, or a connected ecosystem. Complexity is not the objective.

**Visible**
Work is clear and traceable

**Controlled**
Governed, repeatable, reliable

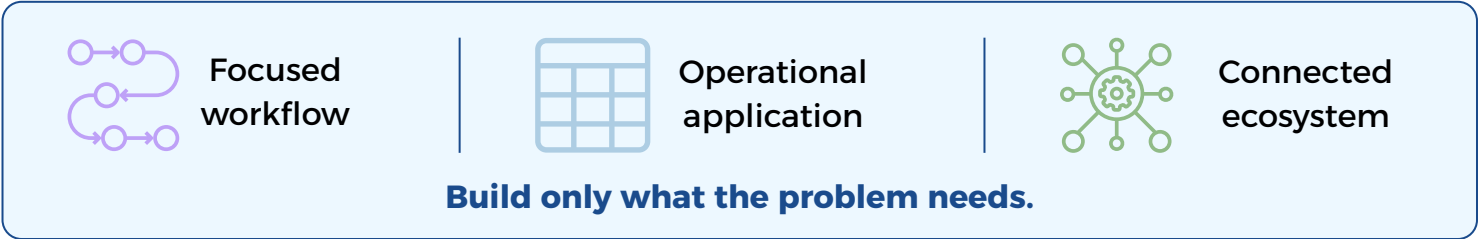

**Adaptable**
Evolves as needs & context change.

The whole process has somewhere to live.

One operational home for the work: With the right blend of people, workflow, reliable automation, and AI for each use case

One Pattern.

Many Important Workflows.

Existing AI WorkBook examples show how fragmented information, repeatable methods, evidence, and human judgement can be brought together in one governed operational flow.

Supplier Quality and 8D Review

Working internal demonstration

Issue
Problem recorded & severity set

Evidence
Evidence uploaded & organised

Supplier
Sends 8D response & attachments

Review
Initial review for clarity

AI Support
Interprets response & analyses

Findings
Summary, risk review & advice

Approval
Review & approve or challenge

Actions
assigned, tracked & followed up

Structured stages with clear ownership and due dates

Automation handles routing, reminders, and updates

AI provides interpretation, assessment, and recommendations

Human judgement at key decisions and approvals

Predictable
stages, ownership, due dates, routing, criteria, statuses, records.

Generative AI
interpret supplier responses, assess against criteria, explain gaps, prepare advice.

Human
own the problem, review evidence, approve or challenge findings.

Learning
Analyse findings across suppliers, products, and failures to identify weakness.

THREE MORE EXISTING AIWB EXAMPLES

Task manager and team planning
Working internal demonstration
Capture work, priorities, capacity and ownership in one flow for daily planning and reflection.

Relationship intelligence
Working internal demonstration
Connect permitted sources, evidence and human-reviewed interpretations; track decisions, follow-ups and audit history.

Event participant experience
Published share-by-link example
Connect participant preferences, personalised views, host visibility and live changes in one governed flow.

APPLICATION OPPORTUNITIES

 Audits

 Claims

 Compliance

 Engineering

 Healthcare

 Procurement

Which important process in your organisation still depends on spreadsheets, inboxes, workarounds, and individual memory?
